Legislative history

1—Short title

These regulations may be cited as the *Electricity (Principles of Vegetation Clearance) Regulations 1996*.

3—Interpretation

In these regulations, unless the contrary intention appears—

Act means the *Electricity Act 1996*;

buffer zone, in relation to an overhead powerline in the bushfire risk area or on private land in a non-bushfire risk area, means the space around the powerline that adjoins the clearance zone around that powerline, as shown in the diagrams in Schedule 1;

bushfire risk area means the part of the State shown in the maps in Schedule 3 as the bushfire risk area excluding the areas shown in those maps as non-bushfire risk areas;

centreline in relation to a powerline means—

(a) in the case of an underground powerline—

- (i) that consists of a single conductor—an imaginary line on the ground directly above that conductor;
- (ii) that consists of more than one conductor—an imaginary line on the ground above the powerline that is equidistant from the outer conductors,

as indicated by markers placed by an electricity entity on the ground above the powerline;

(b) in the case of an overhead powerline—

- (i) that consists of a single conductor—an imaginary line on the ground directly beneath the position maintained by that conductor in still air;
- (ii) that consists of more than one conductor—an imaginary line on the ground below the powerline that is equidistant from the positions maintained by the outer conductors in still air;

clearance zone means the space around an overhead powerline as shown in the diagrams in Schedule 1 (the values of V, H, B, S and P referred to in those diagrams being determined by reference to the tables in that Schedule);

non-bushfire risk area means a part of the State not within the bushfire risk area;

prescribed area—see regulation 3A;

public land means land other than private land;

span, in relation to an overhead powerline, means the part of the powerline that lies between two poles or other supports for that line.

3A—Prescribed areas

For the purposes of Part 5 of the Act and these regulations, each non-bushfire risk area (or portion of a non-bushfire risk area) that is shown on the map in Schedule 2A headed *Portion of Greater Metropolitan Area of Adelaide showing Index to Prescribed Areas Map Sheets* (and in more detail on the following 7 maps indexed on that map) is a prescribed area.

4—Private powerlines

For the purposes of the definition of **private powerline** in the Act, the prescribed voltage is 19kV.

5—General principles governing clearance by electricity entity or council

- (1) The principles of vegetation clearance set out in this regulation are prescribed for the purposes of Part 5 of the Act and govern the duty of an electricity entity or a council to clear vegetation from around powerlines.
- (2) Inspection and clearance of vegetation must take place at intervals of no longer than three years.
- (3) Vegetation must be cleared from within the clearance zone that surrounds the powerline as at the time of that clearance and beyond that zone so that—
 - (a) no part of the vegetation is likely to bend into that zone in winds that might reasonably be expected in the area; and
 - (b) no growth or regrowth of the vegetation is likely to intrude into that zone before the next scheduled inspection and clearance.
- (4) An electricity entity must not clear vegetation—
 - (a) beyond the buffer zone (if any) around the powerline; nor
 - (b) more than is reasonably necessary for the purposes set out in this regulation and for the purposes of enhancing the appearance and ensuring the stability and health of any remaining vegetation.
- (5) However, an electricity entity may clear vegetation beyond those limits (but is not under any duty to do so) at the request of the occupier of the land on which the vegetation is situated.
- (6) A request under subregulation (5) does not authorise clearance of vegetation that would be contrary to the provisions of any other law if carried out by the occupier.

6—Agreement between occupier and electricity entity

- (1) An electricity entity may enter into an agreement with an occupier of private land under which—
 - (a) vegetation around powerlines in a specified area of the land is to be inspected and cleared more frequently than required under regulation 5;
 - (b) the occupier undertakes to carry out the required inspection and clearance of vegetation on that land on behalf of the entity.
- (2) The agreement—
 - (a) must be in writing and executed by the occupier and the electricity entity; and

- (b) must specify—
 - (i) the area concerned; and
 - (ii) the intervals at which inspection and clearance must be carried out; and
 - (iii) unless the occupier undertakes to carry out the inspections and clearance on behalf of the electricity entity—the payments agreed between the parties in respect of the costs of the additional work required under the agreement; and
- (c) may be varied or revoked by further written agreement between the parties; and
- (d) has effect, and may be enforced, as a contract between the electricity entity and the occupier.

7—Vegetation clearance scheme outside prescribed areas agreed between council and electricity entity

- (1) This regulation applies to public land in a non-bushfire risk area but not within a prescribed area.
- (2) An electricity entity may agree a vegetation clearance scheme with a council governing the way in which the entity will carry out its duty to clear vegetation in the area of the council or part of that area.
- (3) The factors that should be taken into consideration in formulating a scheme include the following:
 - (a) the nature of the vegetation, including its expected rate of growth;
 - (b) the impact that the clearance work would be likely to have on the amenity of the area;
 - (c) the historical or biological significance (if any) of the vegetation;
 - (d) the long term effect that the clearance work would be likely to have on the health and appearance of the vegetation;
 - (e) the controls on the planting and nurturing of vegetation applicable in the area;
 - (f) the need to prevent damage to the powerlines and interruption to the supply of electricity and to safeguard the public against electric shock and damage to property;
 - (g) the extent and frequency of past vegetation clearance in the area;
 - (h) whether requirements with respect to vegetation clearance and the planting and nurturing of vegetation have been complied with in the area and, if not, the reasons for the non-compliance;
 - (i) the existence and terms of other vegetation clearance schemes;
 - (j) any proposal to alter, remove or underground powerlines in the area;
 - (k) the costs of the proposals (including insurance premiums) to the council and to the electricity entity and the financial resources of the council and entity;

- (l) the limits on the financial and other resources of the electricity entity that may be devoted to the scheme and the schemes for the areas of other councils;
 - (m) any arrangement between the electricity entity and the council conferring on the council a specified role in relation to vegetation clearance.
- (4) A scheme cannot derogate from the principles set out in regulation 5.
- (5) A scheme—
 - (a) must be in writing and executed by the council and the electricity entity (however, separate execution is not required if the scheme is combined with an arrangement under Part 5 of the Act conferring on the council a specified role in relation to vegetation clearance); and
 - (b) may be varied or revoked by written agreement between the parties.
- (6) A vegetation clearance scheme as agreed has effect, and may be enforced, as a contract between the electricity entity and the council concerned.

8—Objections relating to vegetation clearance

- (1) An occupier or owner of private land may lodge an objection with the Technical Regulator concerning a matter set out in a notice of intention to enter land to carry out work received from an electricity entity or council under Part 5 of the Act.
- (2) An objection under this regulation must—
 - (a) be made to the Technical Regulator in writing; and
 - (b) be lodged with the Technical Regulator within 21 days after receipt of the notice to which the objection relates or such further time as the Technical Regulator allows.
- (3) The Technical Regulator must, on receipt of an objection, notify the electricity entity or council, as the case may require, of the objection.
- (4) On receiving notification of the objection, the electricity entity or council is prohibited from carrying out the clearance of vegetation to which the objection relates until the objection has been determined by the Technical Regulator.
- (5) The Technical Regulator may—
 - (a) dismiss the objection; or
 - (b) direct the electricity entity or council to take or to refrain from taking any specified action in relation to the matter; or
 - (c) if the objector and the electricity entity or council have reached an agreement as to how the objection might be resolved, and the agreement does not involve a breach of these regulations—determine the objection so as to reflect the agreement.
- (6) The Technical Regulator may dismiss the objection—
 - (a) on the ground that—
 - (i) the subject matter of the objection is substantially the same as the subject matter of an objection previously considered; or
 - (ii) the objection is frivolous or vexatious or without reasonable basis; or

- (iii) the objector has not made a reasonable attempt to resolve the matter by agreement with the electricity entity or council; or
 - (b) if satisfied that the objector and the electricity entity or council have entered into an agreement under regulation 6 that relates to the subject matter of the objection; or
 - (c) if satisfied for any other reason that the objection should not be allowed.
- (7) The Technical Regulator must, as soon as practicable, notify the objector and the electricity entity or council, as the case may require, of the Technical Regulator's determination of the objection.
- (8) An electricity entity or council must, when giving notice of an intention to enter private land to carry out work under Part 5 of the Act, include in or with the notice a statement of the rights of the owner or occupier to lodge an objection under this regulation.

9—Occupier's duty to clear vegetation

- (1) An occupier of private land must keep vegetation (other than naturally occurring vegetation) clear of any private overhead powerline on that land so that—
- (a) no part of the vegetation at any time intrudes into the clearance zone around that powerline in still air; and
 - (b) no part of the vegetation is at any time likely to bend into that zone in winds that might reasonably be expected in the area.
- (2) An occupier of private land is not required to clear vegetation beyond the buffer zone around any powerline.
- (3) An occupier of private land must not clear vegetation which the occupier may not lawfully clear apart from this regulation—
- (a) more than is reasonably necessary for the purposes set out in subregulation (1) and for the purposes of enhancing the appearance and ensuring the stability and health of any remaining vegetation; or
 - (b) in any event, beyond the buffer zone around the powerline.

10—Planting and nurturing vegetation near powerlines

For the purposes of Part 5 of the Act, Schedule 2 sets out requirements for planting or nurturing vegetation near powerlines.

11—Exemptions from principles of vegetation clearance

- (1) The Technical Regulator may, on application—
- (a) exempt an occupier of land on which vegetation is planted or nurtured for commercial purposes (not including the production of timber) from compliance with subregulation 9;
 - (b) exempt a person from compliance with a provision of Schedule 2 in relation to specified vegetation.
- (2) An application under this regulation must—
- (a) be made in a form approved by the Technical Regulator; and

- (b) contain the information specified in the form; and
 - (c) be accompanied by an application fee fixed by the Minister.
- (3) Before determining an application under this regulation, the Technical Regulator must give the electricity entity or council with the duty to keep the vegetation clear of powerlines a reasonable opportunity to make submissions and be heard on the matter.
- (4) An exemption under this regulation—
 - (a) must be in writing; and
 - (b) may be subject to conditions, including a condition that the applicant is to pay any costs that the electricity entity or council incur in keeping the vegetation clear of powerlines in accordance with these regulations.
- (5) A person who contravenes, or fails to comply with, a condition of an exemption under this regulation is guilty of an offence.

Maximum penalty: \$5 000.

Expiation fee: \$315.

Schedule 1—Clearance and buffer zones around overhead powerlines

Part AA—Legend

Part A—Clearance zone around overhead powerlines on public land in a non-bushfire risk area

Diagram A

1. This diagram applies to a powerline that has conductors which are fully insulated (eg aerial bundled cables) or that is constructed to operate at a low voltage (240, 415 or 480 V).
2. The clearance zone as shown extends along the length of each span of the powerline.

Diagram B

1. This diagram applies to a powerline the conductors of which are Insulated Unscreened Conductor ("IUC" or "CCT").
2. The clearance zone as shown extends along the length of each span of the powerline.

Diagram C

1. These diagrams apply to a powerline, the conductors of which are not insulated, constructed to operate at a voltage of more than 480V but less than 33kV.
2. Diagram C.1 shows the clearance zone at the pole or other support at the end of each span of the powerline.
3. Diagram C.2 shows the clearance zone at mid span (as shown in diagrams C.3 & C.4) for each span of the powerline.
4. Diagrams C.3 and C.4 show the manner in which the clearance zone extends along the length of each span of the powerline.
5. The values of P, V and H are set out in Tables 1 and 2 in Part D.

E.1—At each end of a span

E.2—Mid span (as shown in diagrams E.3 and E.4)

E.3—View of clearance zone from above

E.4—View of clearance zone from side

Part D—Tables for determination of value of V, H, B, S and P

- 1 The values of V, H, B, S and P are determined by the voltage at which the powerline is constructed to operate and the length of the span concerned.
- 2 For 132kV and 275kV lines, a "stepout" S is required for the buffer zone.
- 3 The values given are in metres.

- 4 The clearance to uninsulated LV conductors in non-bushfire risk areas is 0.1m for the length of the line and beyond termination poles or structures, as is also the case for fully insulated conductors in any part of the State.
- 5 The value of P determines the clearances required beyond a pole where a line terminates, in addition to clearances at poles or other supports along the length of the powerline.
- 6 A buffer zone of 1m and no clearance zone applies where a neutral conductor (CMEN) is not within the clearance zone or buffer zone of an adjoining conductor.
- 7 The clearance to Insulated Unscreened Conductor ("IUC" or "CCT") is 0.5m for the length of the line and beyond termination poles or structures, in any part of the State.

<u>3.5 metre rule</u> Where the application of the value set out in Table 4 would result in the bottom edge of the clearance zone having a vertical distance from ground level of less than 3.5 metres, the bottom edge of the clearance zone shall have a vertical distance from ground level of 3.5 metres irrespective of the vertical distance it would otherwise have had from ground level by virtue of the value of V.																			

Schedule 2—Planting or nurturing vegetation near public powerlines

- 1 (1) Subject to clause 2, only vegetation of a kind set out in the third column of Table 1 may be planted within the distance set out in the second column from a powerline of a kind set out in the first column.
- (2) Subject to clause 2, only vegetation of a kind set out in the third or fourth column of Table 1 may be nurtured if it is growing within the distance set out in the second column from a powerline of a kind set out in the first column.
- 2 Vegetation may be planted in proximity to a public powerline in a non-bushfire risk area and any such vegetation may be nurtured, if—
 - (a) the vegetation is planted in replacement of vegetation in a stand or avenue of vegetation situated along a road; and
 - (b) the vegetation is of the same species as that being replaced.

- 3 In this Schedule—

exempt vegetation means—

- (a) vegetation (such as small plants that produce flowers or vegetables, ground covers, cereal crops or small bushes or shrubs) with an expected mature height of less than two metres;
- (b) vegetation in relation to which an exemption is in force under these regulations;

prescribed distance means—

- (a) in the case of a powerline constructed to operate at a voltage listed below—the distance set out below in relation to that voltage:

Voltage	Distance (in metres)
500kV	19.0
275kV	12.5
132kV, other than a single pole	15.0
132kV, single pole	10.0
66kV	6.5

- (b) in any other case—six metres.

4—Tables

Table 1—General rules

Powerline	Distance within which planting or nurturing is controlled	Vegetation which may be planted or nurtured	Additional vegetation which may be nurtured
Overhead public powerline, the conductors of which are not insulated, in the bushfire risk area.	Prescribed distance from centreline.	Species listed in Table 2. Exempt vegetation.	Any vegetation planted or self-sown before 1 November 1988.
	More than the prescribed distance but less than twice the prescribed distance from centreline.	Species listed in Table 2 or 3. Exempt vegetation.	Any vegetation planted or self-sown before 1 November 1988.
Any other overhead public powerline.	Prescribed distance from centreline.	Species listed in Table 2 or 3. Exempt vegetation.	Any vegetation planted or self-sown before 1 November 1988.
Underground public powerline constructed to operate at a voltage of 66kv or more.	3 metres from centreline.	Species listed in Table 2 Exempt vegetation.	Any vegetation planted or self-sown before 1 November 1988.
Any other underground public powerline.	No control.
